

Reduce your cancer risk!

Get vaccinated against hepatitis B and HPV

HEPATITIS B

Why vaccinate?

- › Long-lasting hepatitis B infection can lead to liver cancer.
- › Hepatitis B causes **1 in 9** liver cancer deaths in the EU/EEA
- › Around **3.2 million** people in the EU/EEA are living with long-lasting hepatitis B infection and are at risk of liver cancer

Vaccination against hepatitis B and HPV (human papillomavirus) helps protect against infections that can lead to cancer.

Want to know more?

Here are some essential facts.

HPV

Why vaccinate?

- › HPV causes over **33,000** new cancer cases in men and women every year.
- › It is responsible for the majority of cervical cancers.
- › It can also cause throat and other types of cancer.

Widespread vaccination could prevent **90%** of cervical cancers.

Vaccination can prevent infection and cancer caused by hepatitis B and HPV.

Who should get vaccinated?

The hepatitis B vaccine is part of standard childhood vaccination programmes. It is also recommended for adults at higher risk of hepatitis B infection.

HEPATITIS B

Who should get vaccinated?

HPV vaccination is often recommended to both girls and boys. Routine HPV vaccination usually takes place **between 9 and 14 years** of age.

HPV

Speak to your healthcare provider about how vaccination can protect you and your family.
