

Protect yourself against RSV!

RSV (respiratory syncytial virus) is highly contagious. It spreads easily through the air and can lead to serious illness and death.

Want to know more?
Here are some essential facts.

RSV is a common and potentially dangerous virus

Every year in Europe
it causes over:

200 000 hospitalisations
of children

150 000 hospitalisations
of adults

20 000 deaths of people
over 60

RSV can affect people at any age. Almost all children will have been infected with RSV by the time they are 2 years old.

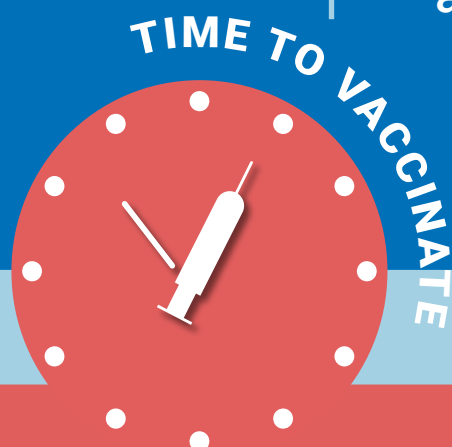

Immunisation protects those most at risk of RSV

- Children born prematurely
- Children under 6 months old
- People over 65
- People with weakened immune systems or pre-existing conditions such as diabetes, heart disease, and lung disease

Pregnant women can get vaccinated and pass that protection to their newborn – protecting them at a critical time.

Don't wait! Speak to your doctor for advice on immunisation.

Immunisation can prevent severe RSV and its complications.
